

1. MR is proud to announce the release of Dream Cymbals three new series in this line represent a wide spectrum of options for the drummer and percussionist. The amazing sound, quality materials and craftsmanship coupled with outstanding pricing offer tremendous **crash-for-the-buck** performance!
2. The *Energy* series offers a modern sound palette in a machine-hammered cymbal. This bright, hard-hitting line meets the needs of anyone playing primarily in an amplified setting. The sound is loud, bright, but with great detail, perfect for modern, technically challenging music where detail is everything!
3. The *Contact* series comes in with a more traditional sound and design. The slightly darker, more open sound makes this a very versatile cymbal. The *Contact* cymbals can take hard hitting, yet turn around and settle into a small jazz or chamber group effortlessly. Dark, warm tones with plenty of detail are characteristics that describe this versatile line.
4. The *Bliss* series lives up to its name in every way! With its roots in traditional cymbals from China, there are almost gong-like undertones to this line! Jazz musicians will appreciate the soft side of these amazing cymbals, producing a full-bodied sound at very low dynamics. The smaller bell and flat profile create a dark, complex sound, aided by the hand hammering during construction. The crashes and crash-rides also make wonderful suspended cymbals for the orchestral musician! Extreme sound at unbelievable prices - what a combination!
5. All lines feature splash, crash and hi hat cymbals, with the Energy and Contact series featuring rides and the Bliss line Crash-rides. Mixing up cymbals between the different lines assures the player the utmost in flexibility in finding the Dream sound that they can call their own.
